B2B INTEGRATION GUIDE

Keycloak Enterprise IAM

Slug: keycloak/keycloak | License: Apache-2.0 | Category: AUTH | Stars: 21.4k

HEALTH SCORE	DIFFICULTY	SAVINGS TELEMETRY
95/100	Media	$2,400 USD / mes en lice

1. Repository Technical Description

Gestión de identidad y accesos para aplicaciones modernas. Soporta SSO empresarial, OAuth2/OIDC, SAML 2.0 y federación Kerberos/LDAP.

SYSTEM DEPENDENCIES:

Java OpenJDK 17+, PostgreSQL o BD relacional, Docker Engine

INTEGRATION TRIGGERS:

OIDC JWT Bearer Issuance, SAML 2.0 Assertion Consumer, Webhook Event Bus

2. STEP-BY-STEP FOR WINDOWS (PowerShell & WSL2)

Validate WSL2 Subsystem

```
wsl --status
wsl --update
docker version
```

Persistence & Session Variables

```
$env:DATA_PATH = "$HOME\oss-atlas-data\keycloak_keycloak"
New-Item -ItemType Directory -Force -Path $env:DATA_PATH
```

Deploy Container in Windows

```
docker run -d --name keycloak-iam -p 8080:8080 -e KEYCLOAK_ADMIN=admin -e
KEYCLOAK_ADMIN_PASSWORD=admin quay.io/keycloak/keycloak:latest start-dev --restart
unless-stopped
```

3. STEP-BY-STEP FOR MACOS (Homebrew, Colima & Apple Silicon)

Colima Provisioning

```
brew install colima docker
colima start --cpu 4 --memory 4 --disk 40
```

Persistence & Zsh Variables

```
mkdir -p "$HOME/oss-atlas-data/keycloak_keycloak"
export DATA_DIR="$HOME/oss-atlas-data/keycloak_keycloak"
```

Multi-Arch Deployment

```
docker run -d --name keycloak-iam -p 8080:8080 -e KEYCLOAK_ADMIN=admin -e
KEYCLOAK_ADMIN_PASSWORD=admin quay.io/keycloak/keycloak:latest start-dev --restart
unless-stopped
```

4. Production Security Hardening Recommendations

1. Network Isolation: Deploy containers inside dedicated bridge networks (e.g., docker network create oss-net).
2. Credentials Management: Store passwords in environment files protected with chmod 600 permissions.
3. Secure Persistence: Configure volume mounts with daily snapshot backups to encrypted storage.
4. CVE Monitoring: Periodically review vulnerability advisories via OSS Atlas metrics.
