B2B INTEGRATION GUIDE

PostgreSQL Relacional Core

Slug: postgres/postgres | License: PostgreSQL | Category: DBS | Stars: 16.5k

HEALTH SCORE	DIFFICULTY	SAVINGS TELEMETRY
99/100	Baja	$1,850 USD / mes vs Clou

1. Repository Technical Description

El motor de base de datos relacional de código abierto más avanzado del mundo. Soporte ACID estricto, extensiones nativas y concurrencia MVCC probada.

SYSTEM DEPENDENCIES:

C Runtime, Linux / POSIX Kernel, Docker Engine 20.10+

INTEGRATION TRIGGERS:

Write-Ahead Log (WAL) Replication, Foreign Data Wrapper (FDW) Query, ACID Transaction Commit

2. STEP-BY-STEP FOR WINDOWS (PowerShell & WSL2)

Validate WSL2 Subsystem

```
wsl --status
wsl --update
docker version
```

Persistence & Session Variables

```
$env:DATA_PATH = "$HOME\oss-atlas-data\postgres_postgres"
New-Item -ItemType Directory -Force -Path $env:DATA_PATH
```

Deploy Container in Windows

```
docker run -d --name postgres-core -p 5432:5432 -e POSTGRES_PASSWORD=postgres postgres:16-alpine
--restart unless-stopped
```

3. STEP-BY-STEP FOR MACOS (Homebrew, Colima & Apple Silicon)

Colima Provisioning

```
brew install colima docker
colima start --cpu 4 --memory 4 --disk 40
```

Persistence & Zsh Variables

```
mkdir -p "$HOME/oss-atlas-data/postgres_postgres"
export DATA_DIR="$HOME/oss-atlas-data/postgres_postgres"
```

Multi-Arch Deployment

```
docker run -d --name postgres-core -p 5432:5432 -e POSTGRES_PASSWORD=postgres postgres:16-alpine
--restart unless-stopped
```

4. Production Security Hardening Recommendations

1. Network Isolation: Deploy containers inside dedicated bridge networks (e.g., docker network create oss-net).
2. Credentials Management: Store passwords in environment files protected with chmod 600 permissions.
3. Secure Persistence: Configure volume mounts with daily snapshot backups to encrypted storage.
4. CVE Monitoring: Periodically review vulnerability advisories via OSS Atlas metrics.
