B2B INTEGRATION GUIDE

VoiceStudio AI Voice & TTS

Slug: voicestudio/voicestudio | License: AGPL-3.0 | Category: AI | Stars: 11.8k

HEALTH SCORE	DIFFICULTY	SAVINGS TELEMETRY
95.95/100	Media	$25 USD / mes vs ElevenL

1. Repository Technical Description

Estación de síntesis de voz neural, texto a voz (TTS) ultrarrealista y clonación vocal con IA local sin límites de caracteres.

SYSTEM DEPENDENCIES:

Python 3.10+ / PyTorch, CUDA 12+ / Apple Silicon Metal, Docker Engine

INTEGRATION TRIGGERS:

TTS Synthesis Stream, Voice Clone Reference Sampling, Audio Normalization Hook

2. STEP-BY-STEP FOR WINDOWS (PowerShell & WSL2)

Validate WSL2 Subsystem

```
wsl --status
wsl --update
docker version
```

Persistence & Session Variables

```
$env:DATA_PATH = "$HOME\oss-atlas-data\voicestudio_voicestudio"
New-Item -ItemType Directory -Force -Path $env:DATA_PATH
```

Deploy Container in Windows

```
docker run -d --name voicestudio -p 7860:7860 -v voicestudio_models:/models
voicestudio/voicestudio:latest --restart unless-stopped
```

3. STEP-BY-STEP FOR MACOS (Homebrew, Colima & Apple Silicon)

Colima Provisioning

```
brew install colima docker
colima start --cpu 4 --memory 4 --disk 40
```

Persistence & Zsh Variables

```
mkdir -p "$HOME/oss-atlas-data/voicestudio_voicestudio"
export DATA_DIR="$HOME/oss-atlas-data/voicestudio_voicestudio"
```

Multi-Arch Deployment

```
docker run -d --name voicestudio -p 7860:7860 -v voicestudio_models:/models
voicestudio/voicestudio:latest --restart unless-stopped
```

4. Production Security Hardening Recommendations

1. Network Isolation: Deploy containers inside dedicated bridge networks (e.g., docker network create oss-net).
2. Credentials Management: Store passwords in environment files protected with chmod 600 permissions.
3. Secure Persistence: Configure volume mounts with daily snapshot backups to encrypted storage.
4. CVE Monitoring: Periodically review vulnerability advisories via OSS Atlas metrics.
